

Using the Kramer Via Presentation Device

Turn on the TV and wait for the Kramer Via to launch.

There are options depending on the scenario:

1. Launch virtually and run a temporary session (student/guest)
2. Run the VIA Application (staff)
3. Miracast
4. AirPlay

Note, the option that displays on the Kramer Collaboration HUB launch page called 'Run on Browser' is not functional. It is specifically designed for Chromebooks.

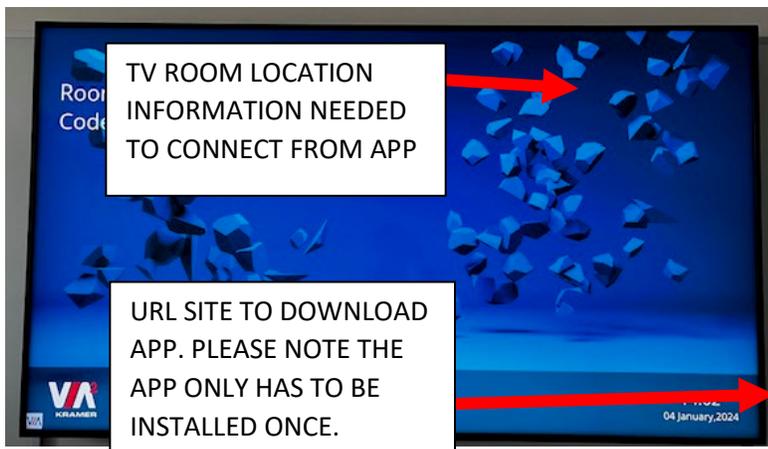

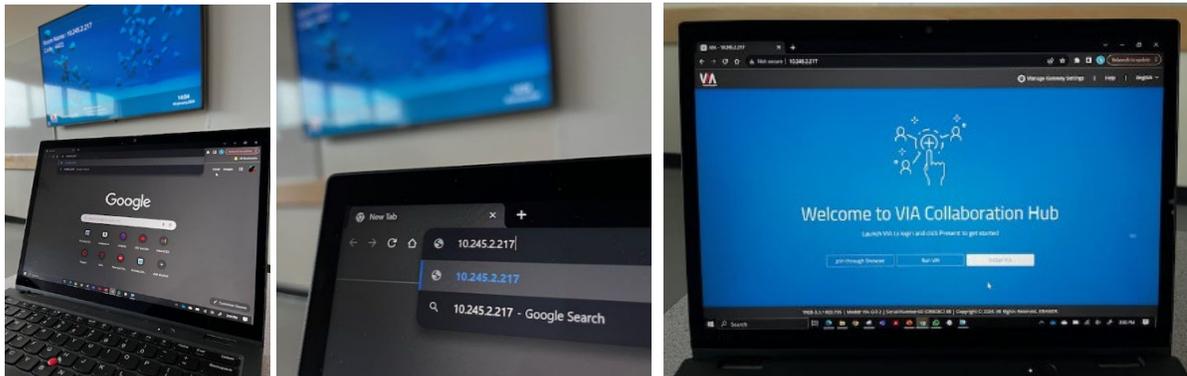

FIRST USE (MUST BE AT SCHOOL TO INSTALL APP)

1. Power on TV (button found in the bottom of screen panel as per picture at right). On the screen, it will display instructions where to go to install the VIA app required.

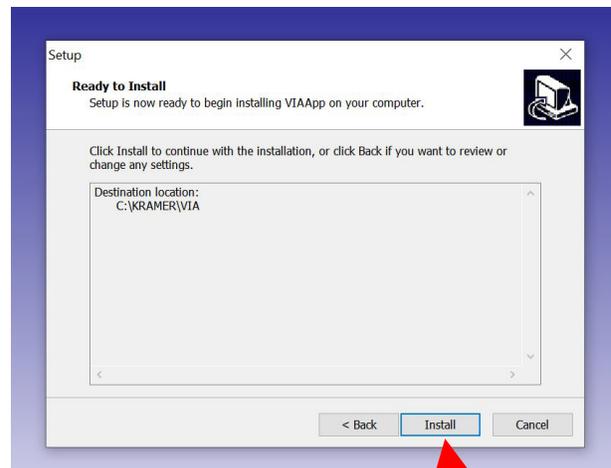

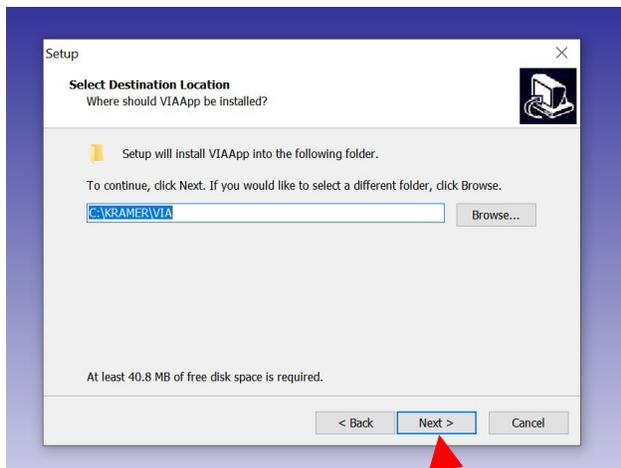

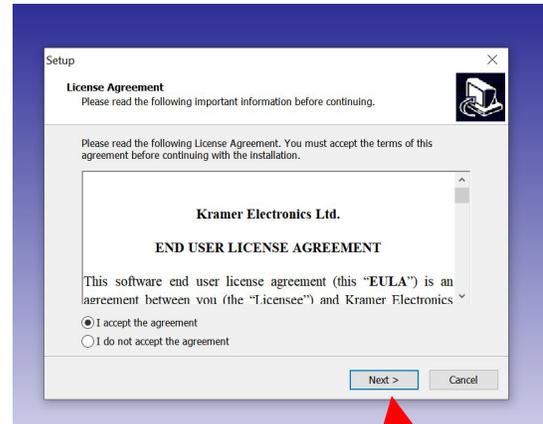

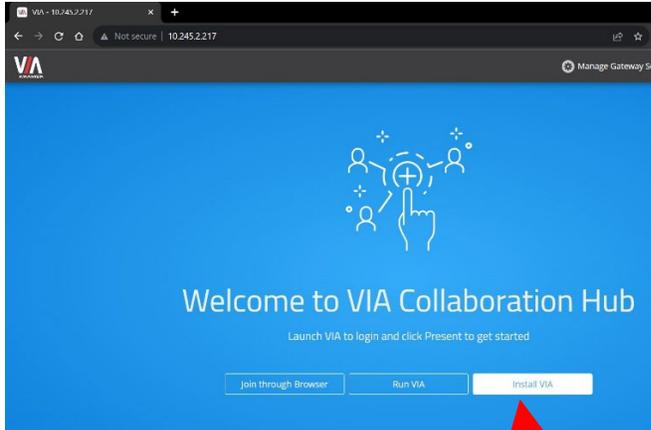

POWER BUTTON LOCATION

2. Open a browser on your laptop or desktop computer and enter the "Room Name" as shown on your tv. NOTE: This is NOT the physical room number, but a specific code for this TV system.

3. On the Via Collaboration Hub screen, choose to 'Install VIA'
 - A program application will be saved to your downloads folder
 - Find the ViaSetup.exe file and run it
 - Install with the default settings

VIA program will proceed to install and will be ready for use shortly after.

SUBSEQUENT USE

TV ROOM LOCATION
INFORMATION NEEDED
TO CONNECT FROM APP

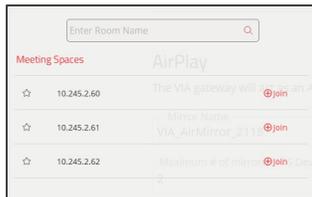

If you teach in multiple zones/rooms, you may wish to keep a digital list of your teaching spaces and their VIA Room Names so you can copy/paste as needed. The room code changes, so you will need to type in the code on the screen to connect (don't bother saving a list of these).

Using the VIA Application

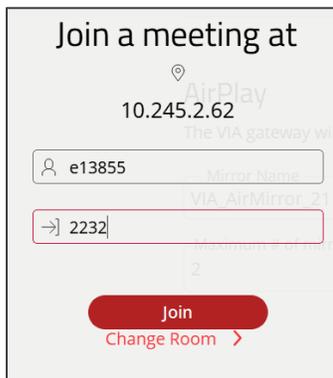

1. Turn on your TV
2. Open the VIA Application on your computer
3. In the Enter Room Name field, enter the Room Name as displayed on your TV

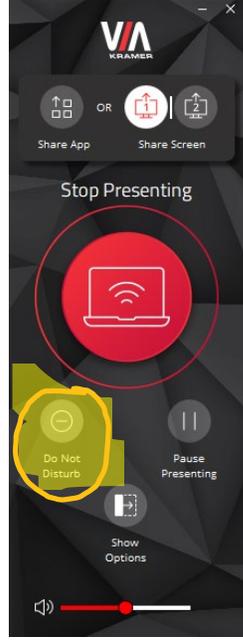

4. Select the Join option to the right of the correct Meeting Space

5. Enter the 4 digit Code as displayed on your TV and then choose the Join button (your username should be auto-filled, but add it if it is missing).

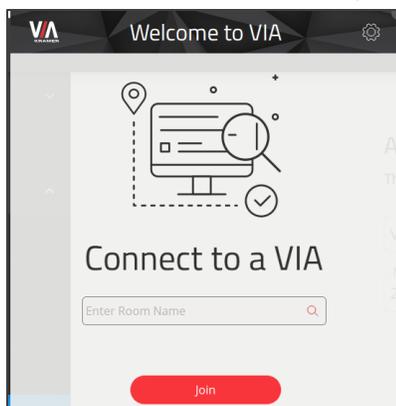

The VIA application now changes to a 'remote control' style interface

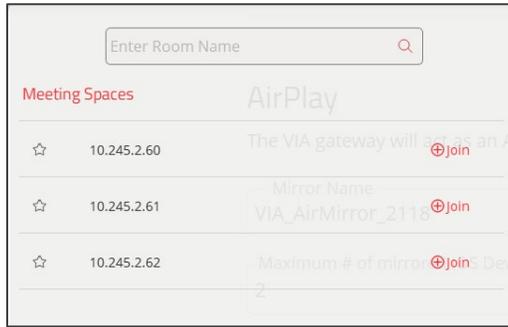

<p>Presenting: You can choose to share your screen or specific applications. Volume is also controlled via the VIA app in conjunction with the tv volume which can be controlled by using the TV remote control.</p>	<p>Do Not Disturb: Once you have started presenting, you can enable the Do Not Disturb feature to ensure no one joins as a 'collaborator' to your session.</p>
	

Students:

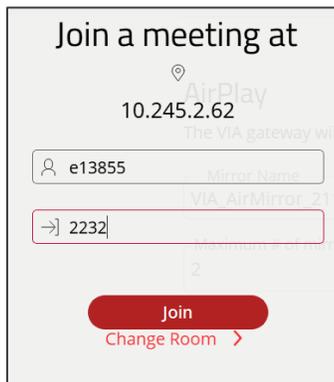

1. Open a browser on your laptop or desktop computer and enter the Room Name
2. On the Via Collaboration Hub screen and choose to 'Run VIA'
3. Open the Downloads folder on the computer
4. Locate and run the downloaded file called VIAApp.exe
5. When the Via interface launches:
 - a. In the Enter Room Name field, enter the Room Name as displayed on your TV

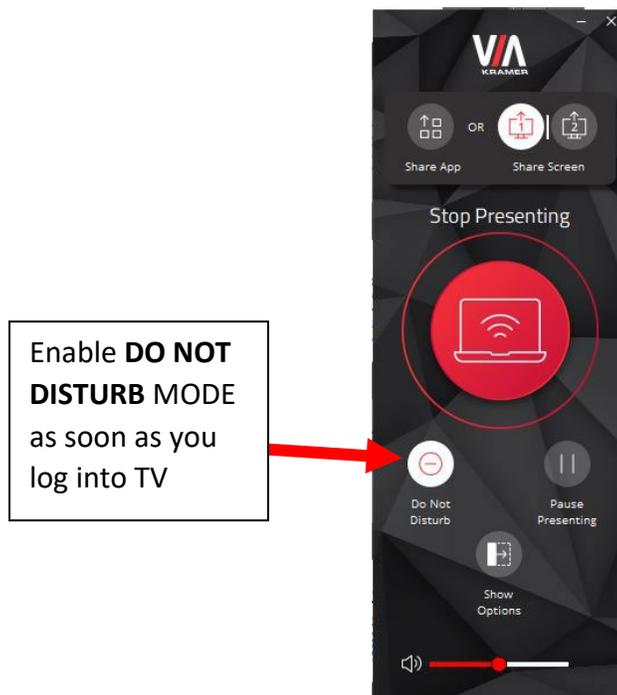

- b. Select the Join option to the right of the correct Meeting Space

c. Enter the 4 digit Code as displayed on your TV and then choose the Join button

IMPORTANT REMINDER!

Enable **DO NOT DISTURB** MODE as soon as you log into TV
